

Our deck surfaces are masterfully constructed from durable, 100% virgin vinyl by DekLok™ and require no staining, painting or sealing, and carry a limited lifetime warranty against defects. Wood options are available.

Our superior custom docks feature all-welded aluminum construction. No bolts are utilized in frames. Everything is welded, meaning Deep Creek Dock units won't work apart, won't get loose. Our 6-inch-wide frames with welded 4"x6" ends, and 1½"x2" center cage supports result in a dock frame we're very comfortable in guaranteeing for 8 years. We use only top-grade 6005T-5 aluminum.

Every Deep Creek Dock Unit is underpinned with ShoreMaster flotation, standard of the industry, featuring a 10-year warranty.

Our dock units hinge together with welded joints for greater stability and virtually no chance for loosening components.

We offer ShorePort floating lifts . . .

the most effective way to dry-dock your personal watercraft. Loading and unloading is smooth and simple via a three-roller system activated with a simple flick of the throttle. One-piece construction design . . . tough enough to withstand constant use.

We manufacture

All our superior custom-built docks are manufactured in our plant at Deep Creek Lake. Our superior design and all-welded construction assure you of a more rigid, longer-lasting dock which will serve you well for years and years to come. And with Deep Creek Docks, you always get "commercial quality with a very affordable price."

All custom-built

You are not confined to "stock" dimensions, nor are you forced to piece together pre-made units in an effort to get the dock you really need. We build any configuration desired, manufactured to any dimension. Single units up to 26 feet long and 10 feet wide are possible.

There's no mystery to the ordering process.

Simply call us and discuss your needs. Or fax us a sketch of the dock you envision, so we can provide a free estimate for the custom unit you specify. Also, we're happy to offer suggestions on how to make your dock more efficient.

On-time delivery.

"Custom construction" signifies that no stock units are held by Deep Creek Docks. Every component of your dock will be custom-made by us to your exact specifications. Such special work demands time to complete, but with Deep Creek Docks, when we commit to a delivery schedule, we meet that schedule with guaranteed delivery times.

Avoid peak-demands for dock products.

We love to take orders in the fall for guaranteed spring delivery. We encourage such advance ordering by featuring special winter-time payment options. Ask for details.

Still not convinced?

We invite you to visit our manufacturing facility and see first-hand how we build our dock units. And it's always good to know that once your dock is in the water, should there ever be problems, maintenance and repair are close at hand. Even in "out-of-warranty" situations, we have a commitment to living up to our reputation for building a superior product.

Let us prove it to you by trusting us with your custom dock order. You'll be happy you did!
